Automated Wireless Data Collection Barcode Solution for JD Edwards World

SnapCollect, as an integrated JD Edwards solution, offers real-time data capture, data entry, validation and much more. **SnapCollect** eliminates paper handling & delayed and/or duplicated keyed entry while reducing costs and increasing productivity.

SnapCollect provides an interactive browser based interface that allows you to work with distribution transactions that are linked, real-time, to your JD Edwards **World** application. This product enables the collection of transaction data required for inventory, distribution, and advanced warehousing applications with the use of fixed and portable handheld data collection devices. **SnapCollect** will boost productivity, raising accuracy for inventory, shipping and data entry to near-perfect levels.

SnapCollect utilizes a modern open architecture based on a browser user interface and SQL Server. It takes advantage of the newest wireless hand-held barcode units based on Pocket PC.

Computer Discoveries Inc. (CDI) is a major Complementary (value-add) Software Provider to the JD Edwards ERP community. Our flagship ERP2Web B2B/C eCommerce Storefront Solution is used by dozens of JDE companies for affordable Web based Ordering and Inquiry. CDI also offers SnapPay to automate JDE credit card sales transactions and SnapMail to automatically send (triggered) emails.

SnapCollect Functionality:

Inventory, Purchase Order, Sales Order Management

1. Inventory Item Inquiry
2. Inventory Location Inquiry
3. Inventory Item Transfer
4. Inventory Item Adjustment
5. Sales Order Pick (Pack) Slips
6. Purchase Order Receipts
7. Cycle Count
8. Item Ledger (Cardex) Inquiry
9. Receipt Routing

- * On a "custom" basis we can web/wireless enable many other JDE Programs (i.e., Work Order and/or Shop Floor programs)

Comparative Advantages of SnapCollect for JD Edwards:

- We support the most popular JDE warehouse transactions out-of-the-box
- SnapCollect adds additional functionality to JDE transactions
- Being a zero client solution, SnapCollect is less expensive to own, implement & maintain
- Secure transaction processing and data retention
- No changes to existing JDE logic or processes
- Our modern XML interface works with all JDE versions, ESU's and Service Packs
- SnapCollect is not proprietary, it is 100% based on Microsoft .NET code
- Support for Unicode and double-byte languages
- Rapid Implementation and Benefit Solution
- Minimal hardware and software requirements

Technical Requirements for SnapCollect:

Security Setup:

- SnapCollect server resides within your firewall or DMZ
- Two levels of security for SnapCollect server login – User ID and Password

SnapCollect Hardware and Software Setup:

- Windows 2000 or 2003 Server
- SQL Server 2000 or 2005
- IIS – Internet Information Server (Microsoft's Web Server – comes installed with Windows 2003)
- SMTP – Mail Transfer Protocol

SnapCollect Mobile Computer (Handheld) Requirements:

- The unit must be Pocket PC based meaning it works with the Microsoft Windows Mobile version 3.0 or greater operating system and supports Windows Mobile Internet Explorer application.
