- **About ERP2Web**

ERP2Web from CDI is a suite of .NET Framework and BAPI based solution that transforms your SAP application into a real-time Business-to-Business (B2B) and Business-to-Consumer (B2C) Electronic Storefront solution over the web. ERP2Web is easily and rapidly configurable enabling you to extend web functionality quickly without making any changes to your existing back end ERP application.

- **Zero-Client B2B and B2C Solution**

The web server runs on a Windows platform. ERP2Web is a zero client solution with centralized application maintenance. There is no client side software required. A web browser is all that is required.

- **Software Design**

ERP2Web does not require any changes to the SAP business logic. The web client (Browsers) sends a request via the web to the ERP2Web application residing on the Web / Application server. The web server processes that request by connecting to the SAP ERP system by executing BAPI functionality. Remote Function Calls (RFC). The web server then sends the response back to the web.

- **Easy Administration & Customization**

ERP2Web is a highly customizable and easily manageable solution. It comes with built-in, easy-to-use administrative tools to enable you to customize and manage your web presence the way you desire.

- **Robust Multi-Layered -Security**

We share your concern for security with your data on the web. ERP2Web sits behind your firewall (inside the DMZ if necessary) and also maintains your existing SAP data security and integrity.

- **Enabling Disparate Applications**

ERP2Web supports web enabling disparate applications on multiple machines using a single copy of the ERP2Web software and one portal for customers of the disparate applications.

- **Maintenance & Support**

To ensure your satisfaction, CDI has instituted an ongoing Customer Support program. CDI offers comprehensive help desk support and technical service. The program helps ensure that ERP2Web continues to meet your business needs. ERP2Web Customer Support Representatives, who are ERP2Web experts, will promptly address all questions or concerns that come from participating clients who subscribe to ERP2Web maintenance program. By subscribing to the CDI maintenance agreement, a client is entitled to unlimited Call Center and E-mail support. Subscribers also receive ongoing software releases and upgrades.
